## Abstracts

The global Electrified Gasoline(E-gasoline) market size is predicted to grow from US\$ 80.46 million in 2025 to US\$ 261 million in 2032; it is expected to grow at a CAGR of 18.7% from 2026 to 2032.

Electrified gasoline(E-gasoline) is a synthetic liquid fuel produced through an electro-liquid conversion technology, with the same chemical composition as traditional fossil gasoline. Its production utilizes entirely renewable energy and achieves carbon neutrality throughout its entire lifecycle. Upstream, it involves renewable energy power supply, water electrolysis to produce green hydrogen, and carbon dioxide capture facilities; midstream, it comprises synthesis and refining plants that synthesize liquid hydrocarbon fuel from green hydrogen and carbon dioxide through catalytic reactions. Downstream demand primarily comes from sectors with 'difficult emission reduction': existing internal combustion engine vehicles, high-performance racing cars, and special machinery that are constrained by carbon neutrality policies but difficult to electrify. The entire industry chain is driven by carbon neutrality regulations, declining technology costs, and the strategic need to preserve and reuse existing energy infrastructure assets. In 2024, electrified gasoline production was estimated at 5,000-15,000 tons, with an average selling price of approximately US\$3,000-10,000 per ton, a gross profit margin of approximately 30%, and a single-line capacity of 500-2,000 tons per year.

United States market for Electrified Gasoline(E-gasoline) is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Electrified Gasoline(E-gasoline) is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
