The global Electrified Shelf Systems market size is predicted to grow from US\$ 1000 million in 2025 to US\$ 1493 million in 2032; it is expected to grow at a CAGR of 6.2% from 2026 to 2032.

Electrified Shelf Systems are integrated shelving solutions combining power supply, intelligent control, and communication, widely used in retail, warehousing, and logistics industries. This system provides continuous power and data connectivity to electronic shelf labels (ESLs), digital advertising screens, sensors, cameras, lighting, RFID readers, and other devices by embedding low-voltage power rails, power modules, and data interfaces within the shelving. The system typically supports modular installation, plug-and-play functionality, remote control, and centralized management. Traditional shelving cannot power intelligent devices, leading to complex wiring, difficult maintenance, and limited functionality. Electrified Shelf Systems, through a unified power supply and communication platform, significantly simplify wiring, improve equipment stability, and support intelligent operation, making them a key infrastructure for realizing smart retail and smart warehousing. The average price of this product is approximately \$300 per unit, with global sales of approximately 3.4 million units.

United States market for Electrified Shelf Systems is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Electrified Shelf Systems is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Electrified Shelf Systems is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
