The EDM (Electric Discharge Machines) is one of the non-conventional machine used to manufacture complex metals parts. It is significantly used in aerospace and automotive industry where complexity of the parts is higher. For the EDM machines to work the need of electro erosion fluids also called as spark fluids are required. These fluids acts as dielectric between the workpiece and the electrode. Also, it acts as flushing agent in washing the debris produced during the manufacturing process.

Chemical is an important driver of this industry. Emerging economies, particularly in Asia and Latin America, are experiencing rapid industrialization, urbanization, and population growth. This drives the demand for bulk chemicals across various sectors, including construction, automotive, electronics, agriculture, and consumer goods. The rising middle class in these regions is also contributing to increased consumption of chemical products.
