The global Electro-Hydraulic Servo Bending Machine market size is predicted to grow from US$ 486 million in 2025 to US$ 813 million in 2032; it is expected to grow at a CAGR of 7.8% from 2026 to 2032.

The electro-hydraulic servo bending machine is an advanced CNC equipment that uses electro-hydraulic servo synchronous control technology to achieve high-precision sheet bending. It mainly controls the hydraulic system through a servo motor, and the cylinders on both sides achieve synchronous movement under the regulation of a closed-loop feedback system, so that the slider maintains precise position control throughout the bending process. Compared with traditional torsion axis bending machines, it has higher synchronization and repeatability. The equipment is usually equipped with an advanced CNC system that supports multi-axis control, automatic compensation, graphical programming and other functions, and the automation system can be expanded according to actual processing needs. Due to its energy saving, stability and high level of intelligence, the electro-hydraulic servo bending machine has become an important equipment for the modern sheet metal industry to achieve flexible production and improve manufacturing quality.

United States market for Electro-Hydraulic Servo Bending Machine is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
