Electro-optical modulated laser is a laser that uses the principle of electro-optical modulation to regulate the intensity or frequency of its output optical signal. This kind of laser usually includes an optical modulator, which changes the refractive index of light by applying an electric field to the light field, thereby changing its propagation characteristics, thereby achieving modulation of the output optical signal. Electro-optically modulated lasers are widely used in optical communications, optical sensing, optical measurement and other fields, and can achieve high-speed, high-precision optical signal modulation and processing.

The global Electro-optical Modulated Laser market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
