The electrochemical formaldehyde sensor module is a reliable module based on the electrochemical principle that specifically detects the formaldehyde content in the air. It is mainly composed of formaldehyde electrodes, reference electrodes, electrolytes and

control circuits. The current or potential signal generated by the redox reaction on the electrode surface is then converted into a readable value. When formaldehyde in the air enters the sensor module, it will undergo a redox reaction with the electrode surface, resulting in electron transmission and ion diffusion, forming a current signal. The electrochemical formaldehyde sensor module has high precision, fast response and long service life.
