An Electrochromic smart glass is a technological glass, which can change its properties according to the needs of its environment. Electrochromic smart glasses consist of two glass panes with various layers sandwiched between them. Electrochromic smart glasses can be tinted, clear, colored, and opaque. This glass has the capacity to modulate heat and transmit light transmission according to the situation. Low-power consumption and integration of color without color filters are some of the advantages of electrochromic smart glasses. The switching speed of electrochromic glass is slow and it varies according to the size of the glass panel. Larger glass panels may generally take more respond time as compared with shorter glass panels. The desire to regulate the solar radiation through the windows is one of the key reason; most people prefer to use electrochromic smart glass.
