Electrochromic Window Tint Film is an electrically charged film that goes over the top of your existing windows. It's a bit like automatic window tinting. At the touch of a button, the glass changes from transparent to opaque and vice versa. When electricity passes through the film, tiny crystals line up to let light pass through. When someone turns off the power, the crystals become randomly oriented and light scatters, creating an opaque appearance. Electrochromic Window Tint Film is much cheaper and easier to install than having a full set of electrochromic windows.
