The global Electrode Steam Generator market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Electrode steam generators, also known as electric steam boilers, are devices that use electricity to generate steam. Unlike traditional fossil fuel-fired boilers, these generators operate by passing an electric current through a conductive fluid (often water) within a chamber. The electrical energy is converted into heat, which causes the water to boil and produce steam.
