An electrodeposited copper foil machine is specialized equipment used in the manufacturing of high-quality copper foils through an electrochemical process. In this process, copper ions from a copper sulfate solution are deposited onto a rotating drum or belt that serves as a cathode. The machine precisely controls the deposition parameters, such as current density, temperature, and electrolyte composition, to produce uniform and thin copper foils. These foils are essential components in various industries, particularly in the production of printed circuit boards (PCBs), lithium-ion batteries, and other electronic applications. The machine's ability to produce copper foils with consistent thickness, high purity, and excellent mechanical properties makes it crucial for the high-tech electronics and energy storage sectors.

The global Electrodeposited Copper Foil Machine market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
