Electrodeposition coating process is a term for a broad range of industrial processes which includes electrocoating, cathodic electrodeposition, anodic electrodeposition, and electrophoretic coating, or electrophoretic painting. A characteristic feature of this process is that colloidal particles suspended in a liquid medium migrate under the influence of an electric field (electrophoresis) and are deposited onto an electrode. This process is useful for applying materials to any electrically conductive surface. Electrodeposition coating process can also be called electroplating, which is a process for producing a metal coating on a solid substrate through the reduction of cations of

that metal by means of a direct electric current.
