The global Electrodialysis Reversal (EDR) System market size is predicted to grow from US\$ 20920 million in 2025 to US\$ 29870 million in 2031; it is expected to grow at a CAGR of 6.1% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

In electrodialysis suspended solids which carry positive or negative electrical charges can increase the resistance of the membrane dramatically, are deposited on the membrane surface. However, in electrodialysis the problem has been eliminated to a large extent by reversing in certain time intervals the polarity of the applied electrical potential which results in a removal of charged particles that have been precipitated on the membranes. This technique is referred to as electrodialysis reversal (EDR).

Global key electrodialysis reversal system manufacturers include GE Water & Process Technologies (SUEZ), Evoqua Water Technologies LLC etc. The top 5 companies hold a share about 55%. APAC is the largest market, with a share about 34%, followed by North America and Europe with the share both about 27%.
