Electroformed nickel bond blades, also known as electroplated nickel bond blades, are a type of cutting tool used in various industries. These blades are manufactured using an electroplating process where a layer of nickel is deposited onto a substrate, usually a steel or other metal base. The electroforming process allows for precise control over the deposition of nickel, resulting in thin and uniform blade edges. The nickel coating provides the blade with desirable properties such as high hardness, excellent wear resistance, and superior cutting performance. Electroformed nickel bond blades are commonly used for cutting and machining applications that require high precision and fine cutting. They are suitable for cutting materials such as glass, ceramics, hard metals, and composite materials. These blades are known for their ability to produce

clean and accurate cuts with minimal chipping or damage to the workpiece.
