Electrogalvanized steel sheet is a type of steel sheet that has been coated with a thin layer of zinc through an electrolytic process. This process involves immersing the steel sheet in a bath of zinc electrolyte and applying an electric current to deposit the zinc onto the surface of the steel. This coating helps to protect the steel from corrosion and rust, making it suitable for use in a variety of applications, including automotive, construction, and manufacturing. Electrogalvanized steel sheet is known for its smooth, shiny finish and good formability.
