The electrohydrodynamic inkjet printing system (EHD) is a high-resolution printing device that is completely different from the piezoelectric ceramic printer. Piezoelectric printers undergo a process of converting electrical energy into mechanical external force, while electrohydrodynamic inkjet directly acts on the electric field on the working medium. When the electric field is concentrated at the needle tip, its intensity is greatly increased, and droplets much smaller than the diameter of the needle tip can be ejected.

The global Electrohydrodynamic (EHD) Jet Printing System market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
