Electrokinetic chromatography columns are separation and purification devices used in laboratories or industrial scales. They are mainly used to separate biomolecules, proteins, nucleic acids and other biomacromolecules with the assistance of electric fields. By combining electrokinetic separation and chromatography technology, electrokinetic chromatography columns can enhance the accuracy and efficiency of separation, allowing different molecules to be separated quickly and effectively under the combined action of electric fields and mobile phases. This type of equipment is widely used in fields such as biochemistry, molecular biology, pharmaceuticals and biotechnology, and is particularly advantageous in scenarios that require high-purity separation.

United States market for Electrokinetic Chromatography Columns is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
