The global Electroless Plating Equipment market size is predicted to grow from US\$ 166 million in 2025 to US\$ 247 million in 2032; it is expected to grow at a CAGR of 6.0% from 2026 to 2032.

Electroless Plating is a surface treatment technology that does not require an external current. It uses a strong reducing agent to induce a redox reaction in a solution containing metal ions, so that the metal ions are reduced to metals under the action of metal catalysts, and then deposited on the surface of various materials to form a dense coating. Electroless Plating equipment is the core equipment for realizing this process. It introduces a suitable reducing agent to induce a controllable reduction reaction of metal ions in the plating solution on the surface of the part, thereby forming the desired metal coating.
