The global Electrolyte Tracing Leak Detector market size is predicted to grow from US$ 52.8 million in 2025 to US$ 114 million in 2031; it is expected to grow at a CAGR of 13.7% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

The electrolyte tracing leak detector is a device that uses mass spectrometry analysis technology to trace electrolyte vapor to directly measure and determine whether the electrolyte is leaking. In traditional battery production lines, helium is generally used as a tracer gas to detect leaks, but this method is limited to the stage where the battery cell is not completely sealed. Electrolyte tracing technology can be used to detect after the battery cell is filled and sealed.
