Aluminum electrolytic capacitors are one of the most critical components used in the electronics products and are used in all devices that are powered by electricity.

A separator is the paper placed inside aluminum electrolytic capacitors to retain the electrolyte and prevent short circuits.

In order to retain a sufficient amount of electrolyte, the separator must have enough porosity for electrolyte retention. However, the separator must also have high denseness to prevent a short circuit between the anode and cathode.

The global Electrolytic Capacitor Separators market size is projected to grow from US\$ 338 million in 2024 to US\$ 448 million in 2030; it is expected to grow at a CAGR of 4.8% from 2024 to 2030.
