The global Electromagnetic Compatibility (EMC) Testing Service market size is predicted to grow from US$ million in 2025 to US$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Electromagnetic Compatibility (EMC) Testing Service is a type of testing service that ensures electronic devices and systems can function properly in their intended electromagnetic environment without causing interference to other devices or being affected by external electromagnetic interference.

EMC testing involves evaluating the electromagnetic emissions and immunity of a device or system, which includes measuring its ability to emit electromagnetic radiation within acceptable limits and its ability to withstand and operate correctly in the presence of electromagnetic disturbances.

The testing is conducted in specialized laboratories using various equipment and techniques to simulate real-world electromagnetic conditions. It typically includes tests such as radiated emissions, conducted emissions, radiated immunity, conducted immunity, electrostatic discharge (ESD), and electromagnetic susceptibility.

EMC testing is important for manufacturers to ensure their products comply with regulatory standards and requirements, such as those set by the Federal Communications Commission (FCC) in the United States or the International Electrotechnical Commission (IEC) globally. Compliance with these standards is necessary for obtaining certifications and approvals to market and sell electronic devices and systems in different countries.
