The electromagnetic conductive eddy current flowmeter is a device that uses the principle of electromagnetic induction to measure the flow of conductive liquids. It determines flow by applying a magnetic field around a pipe and measuring changes in eddy currents as the liquid passes through the pipe. Because its measurement principle is simple, stable and reliable, and has low requirements on liquid media, it is widely used in flow monitoring and control in water treatment, chemical industry, pharmaceuticals, food processing and other fields.

The global Electromagnetic Conductive Eddy Current Flowmeter market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
