Electromagnetic fan clutch is a component used in vehicle cooling systems to regulate the operation of the engine cooling fan. This type of fan clutch utilizes an electromagnetic coil to control the engagement and disengagement of the fan based on the engine temperature.

When the engine reaches a certain temperature threshold, the electromagnetic fan clutch activates, causing the fan to spin and cool the radiator. Conversely, when the temperature decreases, the clutch disengages, allowing the fan to freewheel and reduce drag on the engine.

Electromagnetic fan clutches are designed to improve fuel efficiency by reducing the power consumed by the fan when not needed, thereby enhancing overall vehicle performance and engine longevity.

The global Electromagnetic Fan Clutch market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
