The global Electromagnetic Field Analysis Software market size is predicted to grow from US\$ 1780 million in 2025 to US\$ 3153 million in 2032; it is expected to grow at a CAGR of 8.5% from 2026 to 2032.

Electromagnetic field analysis software is a professional engineering simulation software for the R&D processes of electronics, electrical engineering, communications, automotive, aerospace, defense, energy, medical, and industrial equipment. It is primarily used for numerical modeling, solving, visualization, and optimization of electric fields, magnetic fields, electromagnetic wave propagation, radiation, scattering, coupling, induction, electromagnetic force, loss, thermal effects, and multiphysics coupling behavior. Multivariate analysis software focuses on software products with electromagnetic field solvers and engineering pre- and post-processing capabilities. Major product forms include 3D full-wave electromagnetic simulation software, high-frequency RF/microwave simulation software, low-frequency electromagnetic finite element software, motor electromagnetic design software, electromagnetic compatibility/electromagnetic interference simulation software, PCB/IC package interconnect electromagnetic solvers, antenna layout and platform-level electromagnetic simulation software, and application-oriented electromagnetic simulation software such as induction heating and wireless charging.

From a demand structure perspective, high-speed, high-frequency electronics, advanced packaging, 5G/6G, satellite communications, automotive millimeter-wave radar, electric drive systems, electromagnetic compatibility (EMC) forward design, defense electronics, and industrial electrification are the main sources of growth. Traditional electromagnetic simulation demand comes from antenna, microwave device, motor, transformer, and electromagnetic actuator design, while recent growth has been

concentrated in complex system-level scenarios, such as automotive radar and vehicle EMC, chip packaging and PCB collaboration, platform-level antenna layout, wireless charging, electric drive system efficiency optimization, aerospace electromagnetic scattering, and complex electromagnetic environment assessment.
