An electromagnetic field intensity analyzer is a device used to measure the intensity of electromagnetic fields within a given area. Electromagnetic fields are generated by the motion of charged particles and exist in various forms of electronic devices, power lines, and natural sources, such as the Earth's magnetic field. Analyzers typically consist of sensors that detect EMF and displays or readings that display electric field strength. The measurement unit of EMF intensity is usually in volts per meter (V/m) or milliwatts per square meter (mW/m 2? express. EMF analyzers are commonly used in industries such as telecommunications, power generation and distribution, as well as research and development. They can be used to measure EMF emissions from electronic devices, assess potential health risks associated with exposure to EMF, and ensure compliance with safety regulations and standards.
