In 2024, global sales of electromagnetic induction capping machines reached 45,000 units, with an average selling price of US\$8,000 per unit. Electromagnetic induction capping machines are highly efficient automated equipment used in the packaging industry, primarily for bottle sealing. They achieve fast and reliable capping by heating metal foil sealing material through electromagnetic induction. They are widely used in the food and beverage, cosmetics, and pharmaceutical industries, especially in liquid packaging. This equipment is characterized by high efficiency, safety, and environmental friendliness, providing a pollution-free and contactless capping process. Upstream raw materials include electromagnetic coils, metal foil, electronic components, and plastic structural parts, with raw material consumption accounting for approximately 65% of the product cost. Global total production capacity is approximately 60,000 units per year, with an industry gross profit margin of 18%-22%. Downstream market demand mainly comes from food and beverage, pharmaceutical, and daily chemical product manufacturers, with the food and beverage industry accounting for over 50% of demand. As consumer demand for food packaging safety and convenience increases, the electromagnetic induction capping machine market continues to expand. Future business opportunities will focus on equipment intelligence, energy conservation and environmental protection, and multi-functional integration, and this market is expected to continue to grow globally, especially in emerging markets.

The electromagnetic induction capping machine market is experiencing rapid growth. As the packaging industry's demands for efficiency, environmental friendliness, and safety

continue to rise, electromagnetic induction capping machines have become an important component of many production lines. This capping technology not only improves capping speed and production efficiency but also enables a pollution-free and contactless sealing process, ensuring product hygiene and airtightness, meeting modern packaging standards. Particularly in the food and beverage, pharmaceutical, and cosmetic industries, the market demand for electromagnetic induction capping machines is constantly increasing as consumers place greater emphasis on packaging safety and convenience.

In terms of market competition, leading global manufacturers have secured a significant market share through technological innovation and product upgrades. Furthermore, with the advancement of smart manufacturing and Industry 4.0 concepts, the intelligence, automation, and connectivity of equipment are becoming new market trends. In the future, electromagnetic induction capping machines will develop towards greater energy efficiency, higher efficiency, and customization to meet the diverse packaging technology needs of different industrial sectors. With global focus on green packaging and efficient production processes, the demand for electromagnetic induction capping machines in emerging markets, especially in Asia and Africa, has enormous growth potential. This market is expected to continue its strong growth momentum in the coming years.
