The global Electromagnetic Lens market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Electromagnetic lens is a device that uses electromagnetic fields to focus and image electron beams. It is a lens composed of a magnetic field generated by an electromagnetic coil. This lens uses a magnetic field to focus and image the electron beam to achieve observation and research of microstructures.

When electrons move in a magnetic field as charged particles, they are affected by the Lorentz force. Axisymmetric magnetic fields can refract moving electrons, thereby achieving focusing. Electromagnetic lenses use this principle to converge electron beams and image samples. Electromagnetic lenses are widely used in high-energy physics experimental instruments such as high-speed electron microscopes and electron spectrometers to observe and study microscopic structures such as atoms and molecules.

As the core component of high-end scientific instruments such as electron microscopes, the market size of electromagnetic lenses continues to expand with the increase in scientific research investment and the development of technology. In recent years, the global electromagnetic lens market has maintained steady growth, mainly due to the rapid development of semiconductors, biological sciences, materials science and other fields, and the demand for high-precision imaging and analysis equipment continues to grow. The stability of electromagnetic lenses is crucial to the quality of imaging and the reliability of scientific research experiments. At present, the stability of electromagnetic lenses has been significantly improved, which can meet the needs of long-term and high-frequency scientific research experiments. With the development of artificial

intelligence and automation technology, electromagnetic lenses have gradually realized intelligent control, and improved imaging quality and ease of operation through functions such as algorithm optimization and automatic calibration. In summary, the electromagnetic lens market will continue to maintain a strong growth momentum in the future.
