The global Electromagnetic Motor market size is predicted to grow from US$ 1271 million in 2025 to US$ 1596 million in 2031; it is expected to grow at a CAGR of 3.9% from 2025 to 2031.

An electromagnetic motor is a device that converts electrical energy into mechanical energy using the principle of electromagnetic induction. The working principle of an electromagnetic motor is based on the law of electromagnetic induction and the principle of Lorentz force. When current passes through an electromagnetic coil, a magnetic field is generated. This magnetic field interacts with the magnetic field generated by a permanent magnet or electromagnet to generate a rotational force in the rotor. By changing the direction and magnitude of the current, the direction and speed of rotation of the motor can be controlled. With the advancement of science and technology and the changing needs of the market, the performance and application scope of electromagnetic motors are also constantly expanding and improving. High efficiency, energy saving, miniaturization, lightweight, and intelligence have become important trends in the development of electromagnetic motors. At the same time, the application of new materials and the innovation of manufacturing technology have also provided new possibilities for improving the performance of electromagnetic motors.

United States market for Electromagnetic Motor is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
