## Abstracts

The global Electromagnetic Release market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Electromagnetic release is a positioning device for normally open fire doors. It uses electromagnetic principles to control the opening and closing of fire doors, so that fire doors are usually kept open to facilitate the passage of personnel and ventilation. When a fire occurs, it can automatically release the fire door, so that it can be automatically closed under the action of ordinary door closers to ensure fire safety. The electromagnetic release is mainly composed of two parts: the electromagnet body (installed on the wall) and the suction plate (installed on the fire door leaf). It is safe and reliable, intelligently linked, and has stable power supply. It is widely used in normally open fire doors on fire evacuation passages in buildings.

United States market for Electromagnetic Release is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Electromagnetic Release is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
