Electromagnetic residual current operated circuit breaker is a safety device that uses electromagnetic mechanism to achieve leakage protection. It can quickly disconnect the power supply when detecting residual current exceeding the set value in the circuit (usually due to insulation damage or electric shock to the human body) to prevent electric shock accidents and electrical fires. It is widely used in residential, commercial and industrial power distribution systems. Compared with electronic circuit breakers, it has a simpler structure, strong interference resistance, and is insensitive to temperature changes. It is suitable for places with poor power grid environment or long-term stable operation.

United States market for Electromagnetic Residual Current Circuit Breaker is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
