Electromagnetic Separators or Magnetic Separators are designed specifically to remove fine iron powders introduced to the base material during the grinding process. This is a process in which magnetically susceptible material is extracted from a mixture using a magnetic force. This separation technique can be useful in mining iron as it is attracted to a magnet. It is suitable for belts with a speed less than or equals to 4.5m/s. With this electromagnetic separator, materials are refined and iron impurities are collected.
