Electromagnetic spreader is a lifting tool that uses the magnetic field generated by electromagnets to absorb and transport ferromagnetic materials. It is widely used in the steel industry, manufacturing, warehousing and logistics, construction, ports and terminals, etc. Upstream raw material suppliers provide electromagnets, steel and other raw materials; accessory manufacturers provide control systems, sensors and other accessories; midstream manufacturers are responsible for design, production and assembly, and distributors/agents sell through online and offline channels; downstream end users cover For steel companies, manufacturing plants, logistics companies, construction companies, etc., system integrators integrate electromagnetic spreaders into larger hoisting systems to provide overall solutions. Electromagnetic spreaders are developing towards intelligent control, high efficiency and energy saving, lightweight design and enhanced safety. Alternatives such as permanent magnet lifters, vacuum lifters and composite lifters combining multiple technologies have appeared on the market.
