An Electromechanical Arm Barrier is a vehicle access control device that raises or lowers a metal arm via motorized mechanisms to permit or restrict traffic. Its robust construction includes a heavy-duty arm, gear-reduced motor, control unit, and vehicle detection sensors, ensuring reliable operation under varying environmental conditions. Compatible with remote controls, induction loops, license plate recognition, or network commands, it is widely used in parking lots, toll stations, and logistics hubs for efficient traffic management. Advanced versions may feature anti-collision technology to halt arm movement upon detecting obstacles, thereby preventing accidents.
