The global Electromechanical Brakes market size is predicted to grow from US\$ 856 million in 2025 to US\$ 1029 million in 2031; it is expected to grow at a CAGR of 3.1% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Electro-Mechanical Brake, also called electro-mechanical brake is a mechanical part that stops or decelerates moving parts in a machine. The brake is mainly composed of a brake frame, brake parts and a control device. Some brakes are also equipped with an automatic adjustment of the brake clearance. In order to reduce the braking torque and structure size, the brake is usually installed on the high-speed shaft of the equipment, but large equipment with high safety requirements (such as mine hoists, elevators, etc.) should be installed on the low-speed shaft near the working part of the equipment on.

The increasing adoption of industrial automation in manufacturing and production processes is a significant driver for the EM brake market. EM brakes are crucial components in automated machinery and equipment to ensure precise control and safety during operation. The expansion of the global manufacturing sector, particularly in emerging markets, has driven the demand for industrial machinery and equipment, including those equipped with EM brakes. These brakes are used in various manufacturing processes, such as metalworking, printing, and packaging.
