Electron Beam Etching Machine is a specialized equipment used for etching or patterning surfaces of various materials using an electron beam. It is commonly employed in the semiconductor industry and other fields that require high-precision microfabrication and nanofabrication processes.

According to the SEMI, global sales of semiconductor equipment was US\$ 109 billion in 2022, a year-on-year increase of 5.6%. Mainland China is the largest semiconductor equipment market in the world. For the third consecutive year, China remained the largest semiconductor equipment market in 2022 despite a 5% slowdown in the pace of investments in the region year over year, accounting for \$28.3 billion in billings. China Taiwan, the second-largest destination for equipment spending, recorded an increase of 8% to \$26.8 billion, marking the fourth straight year of growth for the region. Equipment sales to Korea contracted 14% to \$21.5 billion. Annual semiconductor equipment investments in Europe surged 93%, while North America logged a 38% increase. Sales to the Rest of World and Japan increased 34% and 7% year over year, respectively.
