Abstracts

The global Electron Beam Sterilization and Modification Services market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

In the electron beam process, a product is bombarded with high-energy electrons, resulting in a cascade of these electrons moving through the target material.

The E-beam process utilizes high energy electrons as its radiation source. The electrons, which are produced by normal electrical current, are accelerated to near the speed of light by means of an accelerator. The electrons are focused to a scan horn of a defined size and scanned in a sweeping motion, creating a curtain of electrons. The product is then conveyed through the scan curtain at a tightly controlled and measured speed.

The process itself takes place behind a radiation shield, typically a large concrete structure, which prevents radiation from leaving the cell. As scanning occurs, the accelerated electrons inactivate any viable microorganisms.

Of the manufactures, STERIS AST, Sterigenics and CGN Nuclear Technology Development captured the top three market share spots in the Electron Beam Sterilization and Modification Services market in 2022. STERIS AST dominated with 12.53% global revenue share, followed by Sterigenics with 10.21% and CGN Nuclear Technology Development with 5.22%. Other key players in this market include E-BEAM Services, BGS, NHV, Guangzhou Huada Radiation, Vanform, Shaanxi Fangyuan Industrial Group, Steri-Tek and EB Tech among others.
