## Abstracts

The global Electron Lens market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Electronic lens is an electron optical system used to focus and image electron beams. Electron lens is a rotationally symmetric electrostatic field or electromagnetic composite field that enables electron beams to focus and form images after passing through it. When electron beams pass through a rotationally symmetric static electromagnetic field, they can achieve focusing and imaging, which is similar to the phenomenon that occurs when light passes through a glass lens. Applying voltage to metal electrodes will form a series of equipotential surfaces between the electrodes. These equipotential surfaces have the ability to make electron "objects" "images" in areas close enough to the symmetry axis. According to their composition and working principle, electron lenses can be divided into electric lenses, magnetic lenses and electromagnetic complex lenses. Electric lenses are mainly composed of electrostatic fields, while magnetic lenses are purely composed of magnetic fields, and electromagnetic complex lenses combine electrostatic and magnetic fields.

As an indispensable component in modern electronic devices, the market size of electron lenses has shown a steady growth trend in the past few years. Electron lenses are widely used in various electronic devices, such as mobile phones, tablets, TVs, cameras, etc. As consumers' requirements for the performance of electronic devices increase, electron lenses play an increasingly important role in improving the imaging quality of devices and user experience. As an emerging optical technology, superlens has the advantages of being thinner, lower cost, and better imaging, providing new opportunities for the development of the electron lens market. In the future, with the continuous upgrading of electronic products and the continuous emergence of new technologies, the electron lens market will continue to maintain a high-speed growth trend.
