## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

The electron microscope is a type of microscope that uses a beam of electrons to create an image of the specimen. It is capable of much higher magnifications and has a greater resolving power than a light microscope, allowing it to see much smaller objects in finer detail. They are large, expensive pieces of equipment, generally standing alone in a small, specially designed room and requiring trained personnel to operate them.

The global Electron Microscopy market size is projected to grow from US\$ 1088.7 million in 2023 to US\$ 1889.6 million in 2030; it is expected to grow at a CAGR of 8.2% from 2024 to 2030.
