Electronic Anti-glare Mirror is a type of rearview mirror specially designed to enhance driving safety and comfort. It detects strong light from vehicles behind through built-in light-sensitive components (such as photodiodes) and automatically adjusts the reflectivity of the mirror surface to darken it and reduce glare. This mirror surface adjustment is usually achieved through electrochromic technology or the use of special coatings, effectively reducing the stimulation of strong light from vehicles behind to the driver's eyes, lowering visual fatigue and the risk of glare during night driving.
