Electronic ceramics refers to ceramic materials used in the electronic industry to prepare various electronic components and devices. It uses artificially refined inorganic powder as raw materials, and achieves specific requirements through structural design, precise stoichiometry, appropriate molding methods and firing systems. The performance is processed to make it meet the requirements of the use of inorganic non-metallic materials with dimensional accuracy. The electronic ceramic housing can achieve high air tightness and high reliability in a small space, thereby contributing to the miniaturization of product terminals.
