## Abstracts

The global Electronic Cigarette Control IC market size is predicted to grow from US$ 1643 million in 2025 to US$ 2302 million in 2032; it is expected to grow at a CAGR of 5.0% from 2026 to 2032.

Electronic cigarette control IC is a specialized integrated circuit integrated into electronic cigarette devices, mainly responsible for controlling and managing the battery, power output, and atomization process. Its core functions include power regulation, temperature control, output voltage stability, battery management (charge and discharge protection), short circuit and overheating protection, and some intelligent adjustment functions. Essentially, it belongs to the power and control system chip with MCU or dedicated ASIC as the core, and is a key core component that determines the safety, stability, and user experience of electronic cigarettes. In 2025, global Electronic Cigarette Control IC production reached approximately 575M Units, with an average global market price of around US$ 2.92 per Unit.

The electronic cigarette control chip market presents the characteristics of 'strong application dependence, moderate technical threshold, and gradually increasing concentration'. The overall development is highly related to the prosperity of the electronic cigarette industry. With the global electronic cigarette products upgrading towards intelligence, security, and compliance, chips are evolving from simple power control to high-precision temperature control, intelligent recognition, and multiple security protections. At the same time, the outbreak of disposable electronic cigarettes is driving the demand for large-scale standardized chips, while adjustable power devices are driving the value increase of mid to high end control chips. Chinese manufacturers occupy the leading position in the competitive landscape and form a complete supply chain. In the future, market growth will be mainly driven by product
