The e-cigarette pressure sensor is a device used to detect the use status of e-cigarettes. It can sense the user?s puffing action and control the switch and atomization effect of the e-cigarette. There are many types of electronic cigarette pressure sensors, such as differential pressure sensors, capacitive microphones, etc. Their working principle is to use the pressure difference between the inside and outside of the electronic cigarette to generate signals to drive the circuit and heating element of the electronic cigarette. The advantage of the electronic cigarette pressure sensor is that it can save battery power, increase battery life, improve atomization efficiency, and improve user experience.
