An electric commutator is a rotary electrical switch in certain types of electric motors and electrical generators that periodically reverses the current direction between the rotor and the external circuit. It consists of a cylinder composed of multiple metal contact segments on the rotating armature of the machine. Two or more electrical contacts called 'brushes' made of a soft conductive material like carbon press against the commutator, making sliding contact with successive segments of the commutator as it rotates. The windings (coils of wire) on the armature are connected to the commutator segments.

Global Electric Commutators key players include Kolektor, Kaizhong, Huarui Electric, Suzhou Kegou, Sugiyama, etc. Global top 5 manufacturers hold a share over 17%.

Asia-Pacific is the largest market, with a share about 69%, followed by North America, and Europe, both have a share about 26 percent.

In terms of product, Hook Type Commutator is the largest segment, with a share over 65%. And in terms of application, the largest application is Automotive Industry.
