The global Electronic Condensate Drain market size is predicted to grow from US\$ 4298 million in 2025 to US\$ 5891 million in 2031; it is expected to grow at a CAGR of 5.4% from 2025 to 2031.

An electronic condensate drain, also known as an automatic condensate drain or electronic drain valve, is a device used in compressed air systems and refrigeration systems to remove accumulated condensate from air compressors, air receivers, air dryers, and other equipment. Condensate is formed when moist air is compressed, and if not properly drained, it can lead to equipment corrosion, reduced system efficiency, and potential damage.

The trend towards smart and connected devices has extended to electronic condensate drains. Some manufacturers are incorporating features such as remote monitoring, control, and diagnostics through connectivity solutions like IoT (Internet of Things) technology.
