The global Electronic Data Capture (EDC) Systems market size is predicted to grow from US\$ 530 million in 2025 to US\$ 826 million in 2032; it is expected to grow at a CAGR of 6.5% from 2026 to 2032.

Electronic Data Capture (EDC) Systems are web-based software platforms primarily used in clinical trials, medical research, and drug registration applications to enable the electronic entry, verification, logical validation, and remote data management of Case Report Form (CRF) data. They replace traditional paper-based CRFs, allowing research centers to directly input subject data via web or mobile devices. The system incorporates data validity checks (such as value ranges and logical jumps), challenge management, and audit trails to ensure data integrity, compliance, and traceability. EDC systems typically comply with FDA 21 CFR Part 11 and GCP regulations and can interface with randomization systems, pharmacovigilance systems, and statistical analysis software. They are widely used in new drug clinical trials, medical device research, and real-world studies, serving as a core tool for the digital transformation of clinical research.

The global Electronic Data Capture (EDC) Systems market is characterized by innovation leadership in North America, stringent compliance in Europe, and rapid growth in the Asia-Pacific region. North America is the largest market, with high investment in innovative drug R&D and the widespread adoption of decentralized clinical trials (DCTs) driving the development of EDC towards cloud-native and platform-based architectures. Europe, under the GDPR and EMA data protection frameworks, emphasizes data localization and privacy enhancement technologies. In the Asia-Pacific region (China, India, and Japan), the acceptance of the SaaS model is increasing due to the export of domestically developed innovative drugs and the booming CRO

industry. Future trends include: integration of real-world data (RWD) and direct EHR connections, AI-assisted logical verification and challenge management, and integrated clinical trial platforms (EDC+RTSM+ePRO). Obstacles include: inconsistent data standards (high CDISC conversion costs), multinational multi-center compliance costs, user training, and resistance to system switching. Dynamics include: leading vendors strengthening RWD functionality, and increased penetration of open-source EDC in small and medium-sized research centers.
