The global Electronic Fiber Fineness Tester market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The electronic fiber fineness tester is a device used to measure the fiber fineness in textiles. It is usually used in the textile industry to determine the diameter of fibers, which can affect the quality and characteristics of textile products. This device works by passing a beam of light through a bundle of optical fibers and measuring the amount of scattered light. The more light scattered, the rougher the fibers, and vice versa. The results can be displayed on a digital screen or printed out for further analysis. The electronic fiber fineness tester is an important tool to ensure consistent quality in textile production.
