The global Electronic Flight Bag market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

An Electronic Flight Bag (EFB) is a device that allows flight crews to perform a variety of functions that were traditionally accomplished by using paper references. In its simplest form, an EFB can perform basic flight planning calculations and display a variety of digital documentation, including navigational charts, operations manuals, and aircraft checklists.

An EFB uses software on a Windows Surface, iPad or other portable device, or on a device installed in the aircraft cockpit, to deliver a range of functions to the pilot that would previously have been in paper format.

The software is the most important part of an EFB device, and the hardware is relatively produced. Currently most of the hardware is Apple iPad or Microsoft's Surface. So in this report, we analyze and research the software of electronic flight bag system. The sales are for software installed capacity and sales revenue is only the software of flight bag system.

Global Electronic Flight Bag key players include Boeing, Airbus, NavAero, International Flight Support (IFS), Thales, etc. Global top five manufacturers hold a share over 75%.

North America is the largest market, with a share over 40%, followed by Europe and APAC, both have a share over 50%.

In terms of product, Type B Portable/Installed is the largest segment, with a share over

50%. And in terms of application, the largest application is Commercial, followed by Air Transport, etc.
