The global Electronic Grade N-Methylpyrrolidone (NMP) Recovery Machine market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

NMP recovery machine refers to equipment specially used for recovering NMP. There are two types of NMP recovery machines: refrigeration recovery type and rotary recovery type. Used, dirty and waste methyl pyrrolidone can be recycled through a solvent recovery machine plus a vacuum decompression system. Because of its high boiling point, direct recovery methods cannot be used. Through vacuum decompression, the recovery heating temperature can be reduced, the recovery quality can be guaranteed, and the recovery safety factor can be improved. From the above properties, it can be seen that the substance is miscible with water. The heat release you found is only the heat of dissolution released when it dissolves in water, similar to the release of a large amount of heat when concentrated sulfuric acid is added to water. Electronic grade N-methylpyrrolidone (NMP) recovery machines are usually used in the field of electronic products.
