The global Electronic IoT Water Meter market size is predicted to grow from US\$ 1079 million in 2025 to US\$ 1525 million in 2032; it is expected to grow at a CAGR of 5.2% from 2026 to 2032.

In 2025, the global production volume of electronic IoT water meters is projected to reach 22.063 million units, with an average selling price of \$50 per unit. The global annual production capacity for electronic IoT water meters stands at approximately 30 million units, with a gross profit margin of approximately 23.2%. An electronic IoT water meter is a type of smart water meter based on Internet of Things (IoT) technology; its core function involves utilizing electronic components and network communication technologies to enable real-time monitoring, data acquisition, and remote management of water resources. The upstream segment of the electronic IoT water meter industry includes components such as brass, gears, and Hall sensors. The midstream segment consists of the manufacturers of electronic IoT water meters, while the downstream segment primarily encompasses applications in commercial, industrial, and residential settings.

The electronic IoT water meter market is currently driven by both large-scale replacement and new smart water management demands. With the upgrading of urban water supply networks, the widespread adoption of tiered/time-of-use billing and remote meter reading, the market is increasingly demanding lower costs, longer lifespans (typically requiring low replacement frequency), stable communication (NB-IoT/LoRa/4G, etc.), accurate metering, and interference resistance. Simultaneously, the industry is upgrading from simply being able to ?read meters? to being able to ?manage? (such as leakage warnings, abnormal water usage analysis, remote diagnostics, and data platform integration), driving companies to invest in data

transmission, platform adaptation, and after-sales service capabilities. Overall, the domestic market is significantly influenced by project-based systems and bidding schedules. While price competition exists, products with advantages in IoT communication and reliability are more likely to gain market share in mid-to-high-end projects. Overseas, however, greater emphasis is placed on certification and compatibility with local communication systems.
