Measuring instruments are measuring instruments used to detect or measure a quantity, or provided for the purpose of measurement, including various indicator instruments, comparison instruments, recording instruments, signal sources, voltage stabilisation power supplies and sensors. Electronic measuring instruments are based on electronic technology and integrate multiple fields of technology to form a single machine or automatic test system, and use electricity, non-electricity and light as test objects to measure their parameters or control the state of operation of the system under test. The measurement function of electronic measuring instruments includes two major parts: one is qualitative testing, the purpose of which is to determine the performance of the target under specific conditions; the other is quantitative measurement, the purpose of which is to accurately measure the quantitative value of the target under test.
