An electronic motor protection relay is an electronic device used to monitor and protect electric motors. They detect abnormal conditions by monitoring the motor's current, voltage, temperature and other parameters, and take appropriate protective measures when a fault or overload is detected to prevent the motor from being damaged or overloaded. These relays are typically equipped with a variety of sensors, circuits, and controllers that respond quickly and break the circuit to protect the motor. Its functions include but are not limited to overload protection, short circuit protection, phase sequence protection, phase loss protection, etc. Electronic motor protection relays are widely used in industrial, commercial and residential areas to ensure safe operation and long life of electric motors.

The global Electronic Motor Protection Relay market size is projected to grow from US\$ 1196 million in 2024 to US\$ 1636 million in 2030; it is expected to grow at a CAGR of 5.4% from 2024 to 2030.
